

SL, grease trap

UNDER SINK PRE-TREATMENT UNIT. Polyethylene Grease Trap, single-block, to be installed in tight spaces, e.g. under the sink, to limit the polluting load when channeled to either a public sewer or a private treatment plant. Designed to obtain an efficient grease separation and a good hydraulic flow, it is suitable to be used when the installation of a standard grease trap underground is not possible. The Grease Trap is equipped with a threaded cover for full inspection and easy removal of grease and other floating materials. The product is completely made of recyclable materials.
