## Special Mechanical Connections

Easy Clip special mechanical saddles are products that provide the pipeline connection, without using any type of adhesives or solvent cements. They are particularly suitable for:

### New Installations:

They carry out a lateral connection to the new-set-up drain or sewer system.

### Preexisting Pipelines:

They allow the creation of a new connection to a preexisting drain or sewer system.

Easy Clip range is suitable for both waste and surface water.

The 4 different product models is designed to suit different types of installation.

### City

#### For smaller diameter pipes

Designed for Plastic compact solid wall pipes PVC/PP/PE Ø200-250-315-400. Vitrified Clay pipes Ø200, Ø250. Structured wall (smooth inside) pipes ID 250. Hole saw Ø152 mm. Socket rubber ring Ø160 mm.

### Plus

#### For large diameter pipes

Suitable for any material pipe (plastic compact solid wall, plastic structured wall and smooth inside, concrete). From Ø300 up to Ø1200. Spherical joint (swivel) compensates ground movements. Socket Ø160 rubber ring.

### Link

#### For large diameter pipes

Suitable for any material pipe (compact solid wall, structured wall smooth inside, concrete). From Ø300 up to Ø1200. Either Ø160 or Ø200 socket rubber ring.

### Tech

#### Thick walled concrete & clay pipes

Designed for thick walled concrete and clay pipes Ø250-350. No internal gaps and resistant to "hard cleaning cycles" (e.g. chains, blades, or high pressure water jetting).

# An alternative working method

With traditional collar-type systems, the main difficulty lies in removing the material beneath the existing pipeline. The Easy Clip Connections provide for a completely different and more professional working methodology.

## The main advantages of using a mechanical connection can be summarized in the following points:

- Major reduction of the time required for excavating and backfilling existing pipelines
- Speed of installation
- Installation without the use of sealants
- Ease of installation
- Low overall installation costs
- Guaranteed joint security
- Flexible solutions

Obviously, the pipeline does not have to be "supported", as is the case with traditional collar-type alternatives. The device's mechanical anchoring system simplifies the operation and drastically reduces the installation time.

**Safety:** curing times are not required (as there is no use of cement or adhesives) and the excavation can be immediately backfilled once the intervention has

been completed. For this reason, there is no need to leave the excavation open on roads, pathways or residential areas. Therefore there is no need for the work site to be monitored or cordoned off in order to prevent any potential accidents, thus providing significant savings.

### With mechanical saddle

### Without mechanical saddle

**Installation tips:**

1. Identify the point at which the connection is required and clean away any debris that may be present.
2. Drill the hole perpendicular to the axis of the main pipe

**Note:**

The use of appropriate equipment for centering the pipe will help to prevent errors during this phase. The installation procedure will not be successful if the hole is performed in a decentralized manner. In the case of non-plastic materials (i.e. ceramic or concrete) it is recommended to drill a guide hole (1) initially before completing the hole using a milling tool with a centring drill bit (2). The drilling procedure should always be carried out using water. In the case of plastic materials, it is best to use a milling tool with an incorporated centring drill bit.

If more than one connection needs to be performed on the same tract of pipe, be sure to leave at least 1 meter between each hole.

The installation conditions must always be assessed on a case by case basis: loads, compactness of the terrain, presence of foundations, vehicular traffic, groundwater, etc.

3. Deburr the edges of the hole using a suitable tool, this is especially important for holes made in plastic materials.
4. Lubricate the seal.
5. Insert the Clip and tighten the ring nut.

The packaging Easy Clip LINK CITY PLUS include one tube of lubricant gr 150 Art. 6741500

**Installation Easy Clip TECH:**

Easy Clip tech is supplied with one or two adaptors and a spanner. Choose the right adaptor depending on the installation type. For detailed information concerning installation, please see the "installation sheet" contained in the box.

Fix the right adaptor using the supplied screws. Easy Clip Tech is ready to be installed. i.e. on a concrete pipe.
