

The 3+

1. Lightness: Lightweight product and best in class performances due to the **patented wedge shape profile** of the metal core and the PP-GR coating ensuring chemical and corrosion resistance.

2. Mechanical Resistance: Optimized and enhanced thanks to its new design that allows an **excellent breaking load, outstanding elasticity properties** and **durability over time**.

3. Ease of Installation: Thanks to the **bolts tightening sequence indications** and to its symmetricity that allows **bi-directional installation**.

This product is EPD verified and has therefore a lower environmental impact. Thanks to this new design, CO2 emissions have been reduced by 20%

What's New?

The innovative 3+ Backing Ring combines unique **lightness** with an exceptional **mechanical resistance** thanks to its **optimized design**.

Pins inside holes and guided tightening sequence make **Installation simple, safe** and **reliable**.

Available from d20 to d315, DIN drilling.
